YANG Data Model for the IS-IS Reverse Metric Extension
draft-hopps-lsr-yang-isis-reverse-metric-00

Abstract

This document defines a YANG module for managing the reverse metric extension to the intermediate system to intermediate system routeing protocol.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at https://datatracker.ietf.org/drafts/current/.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on 2 October 2019.

Author’s Address

1. Introduction
This document defines a YANG module for managing the reverse metric extension to the intermediate system to intermediate system routing protocol (IS-IS) [RFC8500], [ISO10589]. Please refer to [RFC8500] for the description and definition of the functionality managed by this module.

The YANG data model described in this document conforms to the Network Management Datastore Architecture defined in [RFC8342].

2. YANG Management

2.1. YANG Tree

The following is the YANG tree diagram ([RFC8340]) for the IS-IS reverse metric extension additions.

module: ietf-isis-reverse-metric
augment /rt:routing/rt:control-plane-protocols
   /rt:control-plane-protocol/isis:isis/isis:interfaces
   /isis:interface:
      +--rw reverse-metric
         +--rw metric?   isis:wide-metric
         +--rw flags?    bits
         +--rw exclude-te-metric?   boolean
augment /rt:routing/rt:control-plane-protocols
   /rt:control-plane-protocol/isis:isis/isis:interfaces
   /isis:interface/isis:adjacencies/isis:adjacency:
      +--ro reverse-metric
         +--ro metric?   isis:wide-metric
         +--ro flags?    bits
         +--ro te-metric?        uint32

2.2. YANG Module

The following is the YANG module for managing the IS-IS reverse metric functionality defined in [RFC8500].

<CODE BEGINS> file "ietf-isis-reverse-metric@2019-03-31.yang"
module ietf-isis-reverse-metric {
   yang-version 1.1;
   prefix isis-rmetric;

   import ietf-isis { prefix isis; }
   import ietf-routing { prefix "rt"; }

   organization
      "IETF NETMOD Working Group (NETMOD)";
   contact
      "WG Web: <https://tools.ietf.org/wg/netmod/>"
      "WG List: <mailto:netmod@ietf.org>"
      "Author: Christian Hopps"
      "mailto:chopps@chopps.org>"

   // RFC Ed.: replace XXXX with actual RFC number and
   // remove this note.

   description

"This module defines the configuration and operational state for managing the IS-IS reverse metric functionality [RFC8500].

description "The TE metric value from the sub-TLV if present.";
}
}
augment "/rt:routing/rt:control-plane-protocols/
 +"rt:control-plane-protocol/
 +"isis:isis/isis/interfaces/isis:interface" {
when "rt:type = 'isis:isis'" {
  description
  "This augment is only valid when routing protocol instance
  type is 'isis'.";
}
description
"The reverse metric configuration for an interface.";
container reverse-metric {
  description "Announce a reverse metric to neighbors.";
  uses reverse-metric-data;
  leaf exclude-te-metric {
    type boolean;
    default false;
    description
    "If true and there is a TE metric defined for this
    interface then do not send the TE metric sub-TLV in the
    reverse metric TLV.";
  }
}
}
augment "/rt:routing/rt:control-plane-protocols/
 +"rt:control-plane-protocol/
 +"isis:isis/isis/interfaces/isis:interface/
 +"isis:adjacencies/isis:adjacency" {
when "rt:type = 'isis:isis'" {
  description
  "This augment is only valid when routing protocol instance
  type is 'isis'";
}
description
"The reverse metric state advertised by a neighbor.";
uses tlv16-reverse-metric;
}
}<CODE ENDS>

3. IANA Considerations

3.1. Updates to the IETF XML Registry

This document registers a URI in the "IETF XML Registry" [RFC3688].
Following the format in [RFC3688], the following registration has
been made:

Registrant Contact The IESG.
XML                N/A; the requested URI is an XML namespace.
3.2. Updates to the YANG Module Names Registry

This document registers one YANG module in the "YANG Module Names" registry [RFC6020]. Following the format in [RFC6020], the following registration has been made:

name       ietf-isis-reverse-metric
prefix     isis-rmetric
reference  RFC XXXX (RFC Ed.: replace XXX with actual RFC number and remove this note.)

4. Security Considerations

The YANG module specified in this document defines a schema for data that is designed to be accessed via network management protocols such as NETCONF [RFC6241] or RESTCONF [RFC8040]. The lowest NETCONF layer is the secure transport layer, and the mandatory-to-implement secure transport is Secure Shell (SSH) [RFC6242]. The lowest RESTCONF layer is HTTPS, and the mandatory-to-implement secure transport is TLS [RFC8446].

The Network Configuration Access Control Model (NACM) [RFC8341] provides the means to restrict access for particular NETCONF or RESTCONF users to a preconfigured subset of all available NETCONF or RESTCONF protocol operations and content.

The YANG module defined in this document can enable, disable and modify the behavior of metrics used by routing. For the security implications regarding these types of changes consult the [RFC8500] which defines the functionality.
